Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-25 are rejected under 35 U.S.C. 103(a) as being unpatentable over **Fago** et al. (US 6,929,619; hereafter Fago) in view of **Battiatto** et al. (US 5,868,710; Battiatto) or **Zatezalo** et al. (US 6,339,718; hereafter Zatezalo), and in further view of **Gatti** et al. (US 5719761; hereafter Gatti).

The Fago patent discloses an injector ram, a controller, a user interface, and memory including non-volatile memory. The Fago patent does not disclose graphic displays and the use of display formats including different languages. However, the use of these enhancements would have been considered conventional in the art at the time the invention was made in view of the teachings of Battiatto, Zatezalo, and Gatti.

The Battiatto patent shows in figures 13B and 13C graphic displays (30). The Zatezalo patent also shows a graphic display in figure 3. The Gatti patent discloses in column 7, lines 58-61, the capability of changing the display language.

Based on the above observations, for a person of ordinary skill in the art, modifying the apparatus disclosed by Fago with graphic displays, as taught by Battiatto and Zatezalo, and with the capability of changing the display language, as taught by Gatti, would have been considered obvious in view of the proven conventionality of

these enhancements at the time the invention was made, and moreover, because graphic displays would have improved the understanding of display data by medical personnel. Finally, the use of multiple languages makes the entire apparatus more practical since the apparatus can be used in more countries other than English speaking countries.
